

Final HTML Project Assignment: “Delicious Bites Restaurant Website”

Scenario

You are a web developer at **Delicious Bites**, a local restaurant that wants a full HTML-only website to showcase their menu, take online orders, and connect with customers.

Your task is to create a 3-page website using HTML tags, attributes, and all input types you’ve learned so far.

Pages Required

1. Home Page (index.html)

Purpose: Introduce the restaurant and show the food menu.

Requirements:

- Add the restaurant name in a heading.
- Write a short paragraph about the restaurant.
- Add navigation links to Home, Order, and Contact pages.
- Create a Food Menu Table using `<table>`:
 - Columns: Dish Image, Dish Name, Category, Price, Available Offers
 - Add at least 5 dishes.
 - Insert small food images inside `<td>` cells.
 - Use `rowspan` or `colspan` at least once.
- Below the table, add a list of restaurant special items (using `<ul>` or `<ol>`).
- Embed a YouTube food video using `<iframe>`.
- Add one audio clip (background or welcome message).
- Embed a Google Map iframe showing the restaurant location.

2. Order Page (order.html)

Purpose: Create an online food order form.

Requirements: Include a form that uses as many input types as possible, including:

Input Type	Purpose
text	Customer name
email	Customer email
tel	Phone number
password	For secure order code
radio	Choose delivery method (Home / Pickup)
checkbox	Select extra toppings or sides
number	Quantity of items
range	Choose spice level (1–10)
date	Delivery date
time	Delivery time
color	Pick your favorite theme color
file	Upload payment receipt or ID
select	Choose dish (dropdown)
textarea	Special instructions
submit	Confirm order
reset	Clear form

- All fields must have labels, name attributes, and placeholders.
- At least one field should be required using **required**.
- Use `<fieldset>` and `<legend>` to organize form sections (e.g., “Customer Details”, “Order Details”).

3. Contact Page (contact.html)

Purpose: Let users contact the restaurant for questions or feedback.

Requirements:

- Create a contact form (name, email, message, subject).
- Add the restaurant’s address, phone number, email.
- Embed the same Google Map from Home Page.
- Add social media links (Facebook, Instagram, YouTube) using `<a href="">`.

Bonus Challenges (Optional for Extra Marks)

- Use internal linking (`href="menu"`) to jump to sections on the same page.
- Add a small video tag (`<video>`) showing cooking preparation.
